DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 1, 3, 4, 6, and 22 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4, 6, and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Gustafson et al. (U.S. Patent Application Publication 2001/0054293 A1).

As per claim 1, Gustafson et al. disclose compressor 14 (inherently driven by some means, not shown) and a cooling system comprising heat exchanger 18, variable speed blower 52 driven independently of the compressor (by controller 56), and at least one sensor sensing a condition of the refrigerant (see paragraph 0029, lines 3-12 regarding condenser temperature sensor, compressor discharge temperature sensor, compressor discharge pressure sensor, suction temperature sensor and suction pressure sensor) to control blower 52 in real time.

As per claims 3, 4, and 22, Gustafson et al. disclose the sensor being a compressor discharge temperature sensor (paragraph 0029, line 10).

Art Unit: 3744

As per claim 6, Gustafson et al. disclose the blower and sensors being associated with controller 56.
